Intelligent Micro Patterning Announces Record Annual Revenue in 2005

Intelligent Micro Patterning, LLC, St. Petersburg, Florida, announced record financial results for the year ending 2005, with over \$1.0 million annual revenue and record profitability. The improved results were driven by the introduction of the SF-100 Auto Stage, an automated version of the proven SF-100 maskless lithography system. The SF-100 is a unique, maskless photolithography system that utilizes patented Smart Filter technology, licensed by Intelligent Micro Patterning, LLC from the University of South Florida. Smart Filter technology incorporates proprietary, cutting-edge, micro-optical techniques to rapidly project master images directly onto diverse substrate materials, such as quartz, ceramics, metals and plastics, without the use of photomasks.

Dr. Jay Sasserath, the Company's Chief Executive Officer, stated, "These exceptional results are a direct result of how well the SF-100 Auto Stage system has been accepted by the global marketplace. We have shipped the Auto Stage system around the world and have successfully demonstrated its use in a variety of applications and processes. This past year also marked our first installation in Asia, further increasing our worldwide presence. The SF-100 Auto Stage system is expected to be a significant source of revenue in 2006 and beyond for Intelligent Micro Patterning."

In order to continue its growth in the new year, Intelligent Micro Patterning, has announced an expansion of its global headquarters location in St. Petersburg Florida, to accommodate additional lab space and facilities. A new, redesigned website has also been implemented, which provides potential customers with up-to-date information on the company, products, and technology.
